EDUCATION

Trinity College Dublin

Bachelor of Science in Computer Engineering

September 2023 - May 2027

Dublin, Ireland

SKILLS

- **Languages:** Python, C/C++, JavaScript, TypeScript, SQL
- **AI/ML & GenAI:** PyTorch, Scikit-learn, LangChain, RAG, LLMs, Ollama
- **Backend & Databases:** FastAPI, Flask, PostgreSQL, MySQL
- **Infrastructure & Tools:** Docker, AWS, Git, Streamlit

EXPERIENCE

AI Engineering Intern

Dailoqa

May 2026 - July 2026

Noida, India

- Built an agentic home-loan origination system using LangChain `create_agent`, orchestrating multi-turn workflows and tools for EMI, DTI, FOIR, LTV, KYC/CIBIL, document verification, and underwriting.
- Engineered PostgreSQL persistence for application state, tool events, and assessment results, and containerized the end-to-end system using Docker Compose.
- Integrated Ollama for local LLM inference and Groq for cloud execution, enabling configurable model backends while keeping financial and underwriting logic deterministic.
- Built an Opik evaluation and observability pipeline for final-response quality, agent trajectory, DB persistence, and regression testing, achieving 100% pass scores across validated strong and weak applicant flows.

Frontend Developer Intern

Interra Systems

May 2025 - July 2025

Noida, India

- Developed guided tours in Angular (v10) with Driver.js, reducing new-user onboarding time by 40%.
- Resolved Angular build and dependency issues, ensuring 100% successful deployments across multiple projects.
- Designed custom UI components and step-based walkthroughs that improved user experience and reduced support queries by 25%.
- Authored integration and troubleshooting guides, cutting developer onboarding time by 30%.

PROJECTS

- **JBAC AI Trading & Financial Analysis Platform** | Python, FastAPI, Angular, AWS Sep 2025
 - Developed an AI-driven platform to analyse financial data and generate trading insights using Pandas, NumPy, and LLMs.
 - Implemented financial risk metrics including return analysis, volatility estimation, and trend analysis for decision support.
 - Designed a multi-agent system, improving prediction accuracy by **25%**.
 - Built interactive dashboards to visualize market performance, increasing user engagement by **50%**.
- **AI-Powered Job Search Assistant** | Python, IBM Watsonx, Django, Gradio Aug 2025
 - Engineered an automation workflow to evaluate resume-job compatibility and generate interview preparation documents.
 - Accelerated job preparation and search by **95%**, eliminating multi-hour manual tasks.
 - Built a real-time web scraper to fetch job details and compile historical interview data **90×** faster than manual research.
 - Integrated Gradio and IBM Watsonx models to deliver actionable insights through an interactive user interface.
